Software Developer

<u>The Position</u>

We are seeking an experienced Software Developer to work on a variety of projects targeting database access technologies.

We are looking for someone who is enthusiastic about collaborative working and sharing of ideas and a willingness to learn.

We are a passionate, forward-thinking, innovative company where things are always happening. We're looking for people who work quickly, are competitive self-starters, smart and do what is needed.

<u>Responsibilities</u>

- Writing and debugging code.
- Performance profiling and optimization of code.
- Designing and implementing new database middleware components.
- Supporting / maintaining deployed code bases.
- Work alongside our support team to diagnose and fix customer issues.
- Communicating with all levels of the organisation, including the directors.

<u>Required skills</u>

- Expertise in C Programming is essential. (2+ years commercial experience).
- C++ an advantage.
- Porting software between Linux and Windows.
- TCP/IP (IPv4 and IPv6) socket programming.
- Experience of relational databases and SQL an advantage but not essential.
- Knowledge of SOAP and REST API's an advantage but not essential.
- Knowledge of OpenSSL an advantage but not essential.
- Building of open source software.
- Ability to adapt and learn new technologies on the job as required.
- Excellent verbal and written communication skills. All applicants must have the right to work in the UK without restrictions.
- Must be a self-starter with a strong attention to detail.
